

GSCAN

A simple, yet powerful and feature-rich scanning application that scales up from just a few physical or digital documents to massive high-volume document batches.

gscanonline.com/desktop

- Production Volume Scanning
 - Extraordinary Customization and Configuration capabilities
 - Support various sources - MFDs, Scanners, and Watch Folders
 - IQ² Technology - Image Optimizations
 - Advanced Form Recognition - Immaculate click-to-index™ OCR
 - Sophisticated Exports - SharePoint, Office 365, ECM, LOB, File Systems
- 

With high level customization and configuration capabilities, GScan adapts to any of your business needs. GScan supports your document input lifecycle through scanning, barcode recognition, automatic document separation and form classification, indexing, automatic recognition and much more.

Broad Scanning Capabilities

Got TWAIN or ISIS Drivers? Great, then you've got more than just options, you have a whole range of all-in-one MFPs and scanners to work with. Not to mention a watch folder that will feed your batches of work to your assigned jobs.

IQ² Technology

Automation made easy. Automated features in, document orientation, deskew, cropping, color detection, digital color-filtering, despeckle, cleaning up text background, and black & white conversion with adaptive thresholding. Retain high quality images and reduced files sizes up to 100x the original - make your document retrieval rapid and readable.

Manual typing is a thing of the past.

With support of automatic recognition of structured and semi-structured documents, the GScan Designer enables you to design a template that will indicate where automatic extractions of information will be located. If you need a more hands-on approach, then we've got you covered, with Zonal OCR.

Structured Documents

Create templates for many static form documents, such as claims, banking payment orders, or even transfer of funds. Handwritten recognition is also detected along with being able to setup individual imaging features to maximize recognition.

Semi-Structured Documents

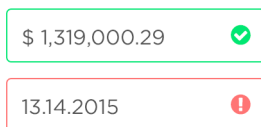

Search, locate, and recognize. GScan is intuitive, and offers a comprehensive tool for defining complex fields and gets the desired information needed. This is especially suitable for **Accounts Payable Invoice Processing**.

ID Capture

Because Müller is not Muller, in any language. Get the identity right, the first time. Superior modules for ID cards, passports, and more allow all information to be recognized whether in or out of the Machine Readable Zone (MRZ).

Click-to-index™ OCR

Zonal OCR allows you to extract data into the appropriate index fields without any manual typing necessary. Verify each step of the way! With a few simple clicks of the mouse, each field of information needed to be extracted comes out precise.

Automatic Validation

Evaluate inscribed or value recognized information and have the system verify whether the value is valid or not. Say bye-bye to non-existent dates, ID numbers, banking and credit card information, and more. GScan intelligently verifies with external sources as a database lookup to always make the perfect match.

Sophisticated Sharing & Exports

Sharing is caring. Flexible exports not only to your File Systems, ECM, LOB (CRM, ERP), but also be able to share broadly with all your peers via SharePoint and Office 365 environments. Export all metadata and images to your SharePoint Library, support Document Sets, Folders, and any documents as Fulltext searchable PDFs.
